PROFILE

Experienced software engineer with 2.5+ years in ASP.NET Core, Angular, MySQL/SQL. Versatile in both large and small teams, Agile methods, remote work, and project management tools (JIRA, TFS). Proactive, quick learner, pursuing professional growth while aligning with company values and goals.

EXPERIENCE

Full Stack Developer (Angular + .Net)   📅 Mar 2023 - Present

NOBILITY | Islamabad, Pakistan

In Nobility, I worked on two projects NPM(Nobility Practice Management US-Medical Project), and HR Portal for managing employees records.

NPM (Nobility Practice Management)

- Devised and executed the application architecture for the NPM project in a team setting, utilizing Angular and ASP.NET Core to maximize scalability, maintainability, and performance.

- Successfully developed Reporting dashboard by working on Angular and .Net web API.

- Deployment of builds on different environments and fixing builds issues timely.

- Team management and fixing production issues timely.
- Engaged with project managers, product owners, and stakeholders to capture requirements and propose technical solutions, guaranteeing the timely delivery of the project.
- Responsible for managing code on git, and Release management.
- Led efforts to ensure faster and more efficient releases by collaborating with cross-functional teams and implementing continuous delivery practices
- Engaged with project managers, product owners, and stakeholders to capture requirements and propose technical solutions, guaranteeing the timely delivery of the project.
- Responsible for managing code on git, and Release management and configure the application environments, including development, staging, andproduction environments, ensuring seamless and accurate deployments.

HR Portal

- Contributed to the development and team management of development from scratch.

- Attend client meetings with BA for requirement gathering before development.

- Resources management for working on different modules.

- Responsible of code quality management, release management and deployment on IIS server.
  Skills: GitHub · ASP.NET Core · Angular · Scrum · Agile Methodologies SQL

Software Engineer   📅 Feb 2021 – Mar 2023

MTBC | Bagh AJK, Pakistan

- Contribute in the Development and maintenance of **WEBSOFT**, a cloud-based medical billing software that include key features like Claims management, Payment posting, Patient eligibility verification, Coding and billing, Denial management, Reporting, EHR, EOB, ERA.
- Developed billing reports through the use of ASP.NET Core, Angular, and SQL Server Procedures.
- Assumed responsibility for managing operations, including implementing hot fixes on the production environment during production hours to minimize downtime and ensure system stability.
- Contributed to development by implementing new features proposed by the business analyst to enhance WEBSOFT's functionality.
- Programmed and set up auto jobs to meet provider needs.

- Effectively communicated with cross-functional teams including Billing, Network, and QA teams to ensure timely delivery and high-quality output.
- Followed agile methodology, specifically Scrum, and utilized JIRA for project management and Git for version control.
